We convert your metered gas units to kWh using the following formula:

Metered volume × metric conversion factor¹ × daily calorific value² × 1.02264 (volume correction) ÷ 3.6 = kilowatt hours (kWh) used.

¹ We convert the gas use into kWh according to your meter type – 2.83 (imperial) or 1 (metric).

² The calorific value of gas changes every day and can range from 37.5 to 43.0. To find out calorific values used to calculate your charges you can visit:
